Reinventing  
Freedom!

A man wearing a dark jacket, olive green pants, a tan cap, and sunglasses is seated on a black three-wheeled motorcycle. He is positioned in the center of the frame, facing right. The motorcycle has large, knobby tires and a high rear fender. The background features a vast, open landscape with brown, scrubby vegetation in the foreground and several large, rugged mountains in the distance. The mountains are covered in patches of snow and have steep, rocky slopes. The sky is a clear, bright blue. A large, grey rock is visible on the left side of the frame.

We're on a mission to bring people  
and nature back together

With our electric all-terrain vehicle, you are free to ride wherever you feel like riding – whenever you feel like riding. The Exoquad marks a new era of electric mobility, inclusion, and togetherness for people with mobility impairments or any form of reduced gait function.

## Our journey

Our journey started back in 2017. Mattias Storvestre and Sigurd Groven met for the first time at a sit-ski camp for spinal cord-injured people. Only two years earlier, Sigurd became paralyzed from the chest down in a mountain bike accident.

First prototype

Mattias' wife is also spinal cord injured and they quickly started discussing the need for a solution allowing them to spend time in nature with their children. Their common passion for outdoor life and the desire for a more extreme level of accessibility, set ideas into motion. In 2020 they founded Exotek, thanks to our Product Designer, Mattias, technical know-how. From that day they have continued to change lives.

First prototype

Free to  
wander

We know what the feeling of dirt on your face is worth. We know that nothing is more valuable than being free to explore. Not only wheelchair-accessible roads and static viewpoints. With the Exoquad you are free to wander. Quietly, safely and comfortably – with minimal impact on your surroundings.

2WD or 4WD, 350 newtons of torque, and 6000 watts of power! The Exoquad doesn't only look the part. It is immensely capable while maintaining a modest footprint. The ultra-low weight and high-volume wheels ensure a very low ground pressure. Speed is set at 15kmph, which is more than enough for off-road use.

With the dense and powerful lithium battery from Norwegian supplier, you can enjoy 2300 wh of capacity for a Altium full day of outdoor fun. Go for a ride! You are free to explore, go fishing, show off, and take in whatever view you want. The Exoquad can handle snow, mud, sand, rock, and stone. It will even conquer stairs, 40-degree inclinations, and 30-cm ledges. A second battery pack can be added if needed.

## Easy maintenance

The sleek lines and highly functional solutions have made the Exoquad easy to maintain. Premium quality parts combined with fast and reliable customer support got your back at all times.

Free to play

## Features and safety

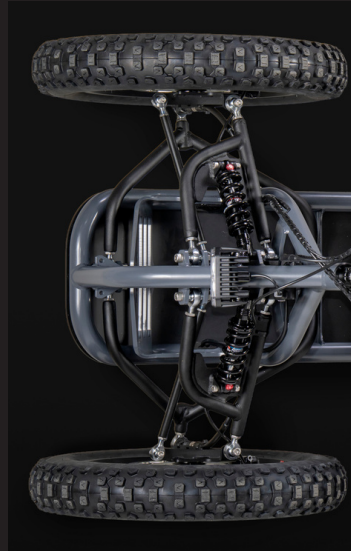

The Exoquad is outfitted with a sturdy rollbar to protect you in case you should take a tumble or flip over. An optional seat belt for extra safety is also available. We use high-traction tires that are very puncture resistant. Larger knob tires can be provided for winter. Want an even better grip on icy roads? We got you. Spikes can be mounted. Enjoy heavy-duty shocks on all four wheels. This ensures stability, adjustability, and a very low impact on the spine when cruising through rough terrain.

Enjoy heavy-duty shocks on all four wheels. This ensures stability, adjustability, and a very low impact on the spine when cruising through rough terrain.

## Accessibility traits and performance

The unique patented A-arm design of the Exoquad makes it incredibly stable when traversing terrain and in extremely steep ascents or descents. It provides an unparalleled ability to crawl through large obstacles and can handle ledges of over 30 cm and inclinations of + 40 degrees. No other products in our category can compete with this. Heavy-duty brakes and powerful motors will take you almost anywhere. With the flip of a switch, you can choose between 2wd or 4wd on the fly.

Free to  
show off

The Exoquad is welded and assembled by hand in the beautiful town of Ålesund, on the Northwest Coast of Norway. Here, we hand-pick every nut and bolt to provide you with premium quality.

When you buy an Exoquad you can trust that it is built to last a lifetime. High-quality steel and aluminum parts secure both strength and durability. The Exoquad can even be modified and upgraded along the way if needed.

## Invest in freedom

Life is too short to sit on the sidelines. The Exoquad is truly a life-changing investment. After all, what's worth more than your god-given right to go wherever you want? Get your order in, and get back out there!

The outdoors is waiting and we promise the Exoquad will put a smile on your face everytime you head out.

- It's a building block for happiness, our founder and wheelchair-user, Sigurd Groven, says. We know your family and friends will appreciate exploring nature with you as well.
